

ABSTRACT

The present study was conducted to analyse the **MATERNAL AND FETAL OUTCOME IN PREGNANCIES WITH MATERNAL CARDIAC DISEASES**. 100 pregnant women with heart disease irrespective of gestation were included in this study. This study was conducted at Govt RSRM Lying In Hospital. The results were tabulated and analysed. It was found that with improved obstetric and cardiac care, maternal morbidity and mortality decreased to a great extent.

KEYWORDS: Heart disease, Maternal outcome, Fetal outcome, ECHO finding.
